

CLIENT CASE STUDY

UT Southwestern
Medical Center**UT Southwestern Goes All in on Projectmates to Drive Construction Success Amid Economic Woes**

Client Name: UT Southwestern

Program Scope: \$1.1 B construction plan

Location: Dallas, Texas

The beginning of a \$1.1B construction plan is not the time to discover your software isn't keeping up. That's exactly where UT Southwestern found itself in 2019. Disparate systems, double-data entry, and software incompatibilities were causing errors and wasted time. After exploring several solutions, administrators liked what they saw in Projectmates. Now the hospital's central platform for construction, Projectmates enables teams to collaborate with any construction team member from anywhere, significantly reducing frustrating bottlenecks.

Challenges:

- Incompatible software stacks
- Double-data issues and error-prone spreadsheets
- Collaboration not sufficient for number of projects

Solutions:

- Configurable software with extensive integrations
- Data stored in a central location for easy access and visibility
- Mobile application allows field and office teams to work closely with real-time data

Results:

- Easier to distribute, view, and manage the complex mix of digital drawings and documents
- Risk mitigated, budgets monitored easily, and delays or changes quickly remedied
- Greater collaboration between team members with easy sharing of the latest updates on project development
